# 1. Overview

## 1.1 Purpose

Due to the absence of a nationally consistent mental health specific classification, admitted mental health care has been priced in the National Efficient Price (NEP) Determination using the Australian Refined Diagnosis Related Groups (AR-DRG) classification. Non-admitted mental health care has been block funded, with amounts reported in the National Efficient Cost Determination.

Since the implementation of the Australian Mental Health Care Classification (AMHCC) Version 1.0 in July 2016, the Independent Hospital Pricing Authority (IHPA) has committed to prioritising the pricing of mental health services using the AMHCC.

Clause A40 of the National Health Reform Agreement requires IHPA to consider transitional arrangements when developing new ABF classification systems or costing methodologies. This includes shadowing the pricing of new classifications, costing methodologies or adjustments, when appropriate. Shadow pricing enables jurisdictions to understand and assess the impact of a new approach on the level and distribution of funding to Local Hospital Networks.

IHPA has developed the Australian Mental Health Care Classification Pricing Feasibility Report 2020–21 to provide an overview of the process undertaken by IHPA to price mental health services using the AMHCC, including shadow price weights for the admitted branch of the AMHCC.

**Shadow price weights for admitted AMHCC** end classes for 2020–21 are included in this report. A shadow pricing period for admitted mental health activity using the AMHCC will commence in 2020–21. The shadow price weights in this report are indicative of the likely cost of these services, and are not to be used for Commonwealth funding contributions by the Administrator of the National Health Funding Pool.

The price weights have been developed using the best available cost and activity data for the financial year 2017–18.

IHPA intends to progress to publishing price weights for admitted AMHCC end classes in the National Efficient Price Determination 2021–22 subject to the feedback received from all stakeholders.

**Community AMHCC** end classes for 2020–21 are not included in this report. As only one jurisdiction provided cost data for community mental health activity, the price weights developed for community AMHCC end classes were not considered sufficiently robust to allow jurisdictions to understand and assess the impact of pricing these services with the AMHCC.

IHPA will work with jurisdictions to further develop and refine the AMHCC community cost model before commencing a shadow pricing period for community mental health activity using the AMHCC.

Full details of the National Pricing Model are in the National Efficient Price Determination 2020–21. This report should be read in conjunction with the National Efficient Price Determination 2020–21.

## 1.2 The Australian Mental Health Care Classification

It is widely recognised that the AR-DRG system was not the ideal classification system to use for ABF of mental health care in the longer term. Diagnosis is not the major cost driver for mental health care and AR-DRGs are not suitable for consumers receiving community mental health care. In 2012, the Pricing Authority determined that a new mental health classification would be developed for mental health services in Australia.

IHPA developed the AMHCC as the national classification for mental health care. The AMHCC is a clinically relevant classification that better explains resource consumption (cost) at the consumer level. It has the potential to support integrated service delivery by providing data across different service settings and health services.

The AMHCC Version 1.0 was implemented nationally on a best endeavours basis from 1 July 2016.

The AMHCC is comprised of six variables:

- Setting
- Mental health phase of care (a new clinician rated variable that describes the prospective primary goal of care to better capture the various acuity stages mental health consumers experience and the different resources involved accordingly)
- Age group
- The Health of the Nation Outcome Scales (HoNOS) / Health of the Nation Outcome Scales for Children and Adolescents (HoNOSCA) / Health of the Nation Outcome Scale 65+ (HoNOS65+)
- Life Skills Profile (LSP-16)
- Mental health legal status (MHLS).

The structure of the admitted setting branch of the AMHCC is shown in Figure 1 and the structure of the community setting branch of the AMHCC is shown in Figure 2. The AMHCC Version 1.0 does not include classes for residential mental health care.

Figure 1 - AMHCC Version 1.0 admitted setting structure

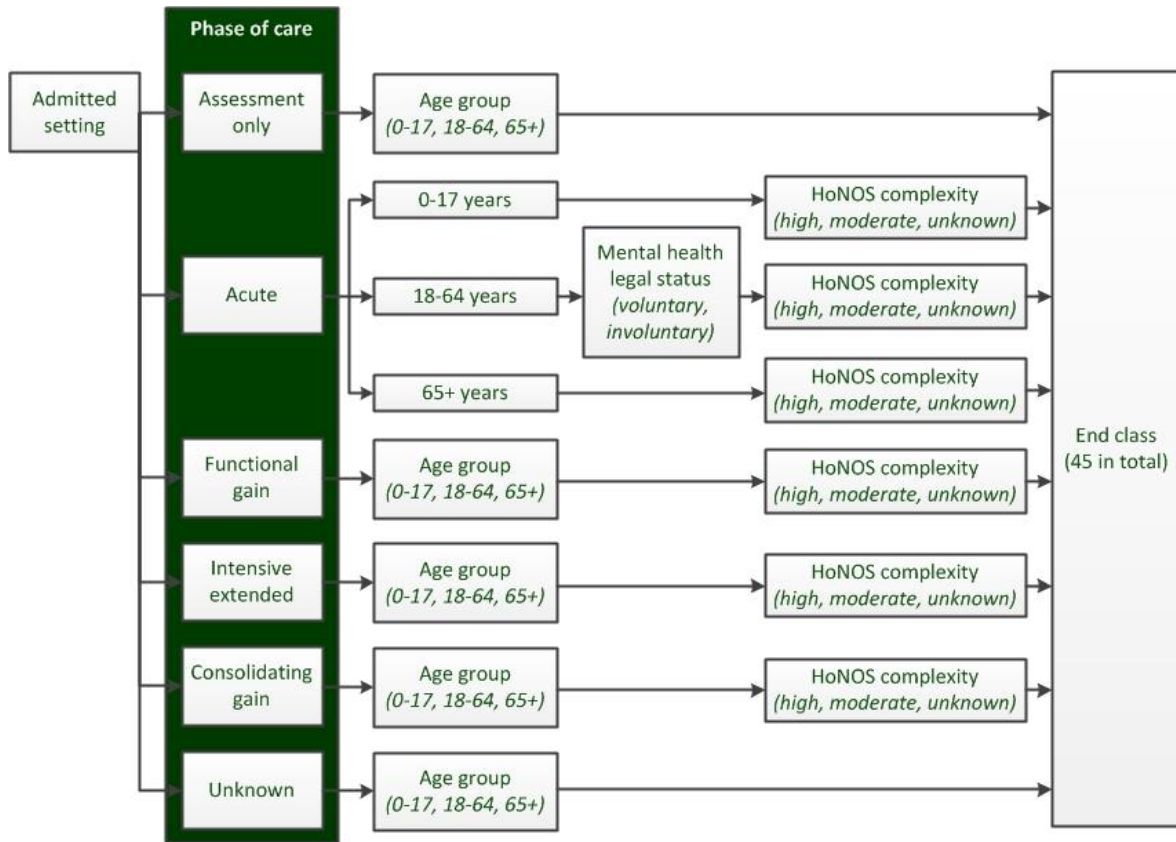

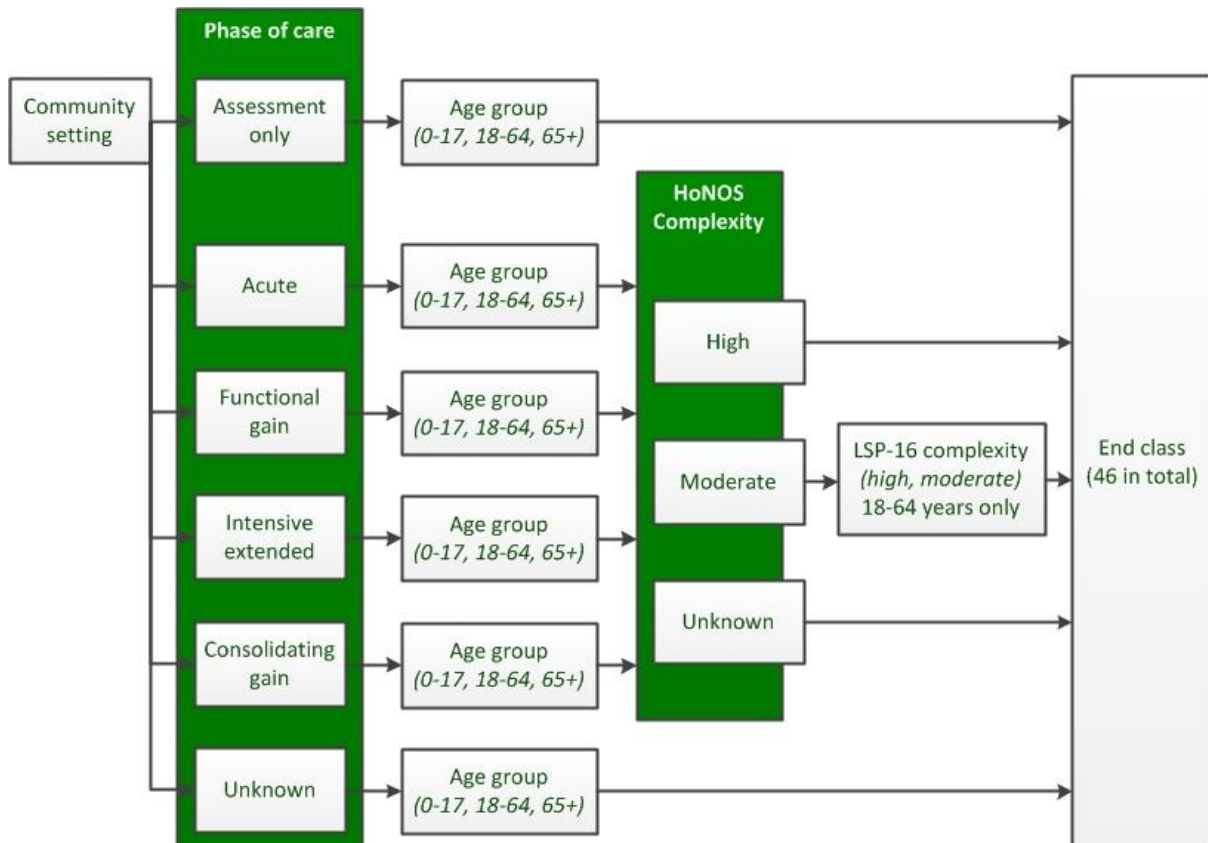

Figure 2 - AMHCC Version 1.0 community setting structure

## 2. Scope of mental health pricing

### 2.1 Scope of mental health care

For the purposes of ABF, mental health care is care in which the primary clinical purpose or treatment goal is improvement in the symptoms and/or psychosocial, environmental and physical functioning related to a patient's mental disorder. Mental health care:

- is delivered under the management of, or regularly informed by, a clinician with specialised expertise in mental health;
- is evidenced by an individualised formal mental health assessment and the implementation of a documented mental health plan; and
- may include significant psychosocial components, including family and carer support<sup>1</sup>.

This includes services provided as assessment only activities.

This definition of mental health care sets the scope of pricing using the AMHCC in both the admitted and community settings. Further information on how mental health care activity was identified in the data sets for shadow pricing using the AMHCC is in Chapter 3.

### 2.1 Impact on the admitted acute pricing model

Admitted mental health care is currently considered part of the admitted acute pricing model and priced according to the AR-DRG classification. Removing the episodes and associated costs of mental health care from the admitted acute pricing model impact on the AR-DRG price weights. Therefore, as well as shadow price weights for AMHCC end classes, shadow price weights have been produced for AR-DRGs that reflect the pricing impacts that would apply to admitted acute care when IHPA prices admitted mental health care using the AMHCC.

# 3. Data specifications

## 3.1 Data sources

### 3.1.1 Activity Based Funding: Mental Health Care National Best Endeavours Data Set

The activity data collection for mental health for ABF reporting is the Activity Based Funding: Mental Health Care National Best Endeavours Data Set (ABF MHC NBEDS). The ABF MHC NBEDS is comprised of a single data collection that includes data items required for the AMHCC for both admitted and community episodes of mental health care. Data is supplied by states and territories on a quarterly basis and reported at three levels:

- Episode of mental health care (admitted and community setting)
- Mental health phase of care (admitted and community setting)
- Mental health service contact<sup>2</sup> (community setting only).

ABF MHC NBEDS data from the 2017-18 year were used in the development of the *Australian Mental Health Care Classification Pricing Feasibility Report 2020–21*.

### 3.1.2 Admitted Patient Care National Minimum Data Set

IHPA also receives data on every episode of admitted patient care through the Admitted Patient Care National Minimum Data Set (APC NMDS). In the admitted setting, episodes of mental health care are identified using the care type<sup>3</sup> 11 *Mental health care*. APC NMDS data from the 2017-18 year were used in the development of the *Australian Mental Health Care Classification Pricing Feasibility Report 2020–21*.

### 3.1.3 National Hospital Cost Data Collection

Cost data is reported through the National Hospital Cost Data Collection (NHCDC), an annual voluntary collection of public hospital cost data. Round 22 (2017-18) NHCDC data were used in the development of the *Australian Mental Health Care Classification Pricing Feasibility Report 2020–21*.

## 3.2 Data linkage and preparation

Mental health activity data is submitted to IHPA through multiple data files:

- APC NMDS file
- ABF Mental Health Care Episode (MHCE) file
- ABF Mental Health Care Phase (MHCP) file
- ABF Ambulatory Service Contact (ASC) file.

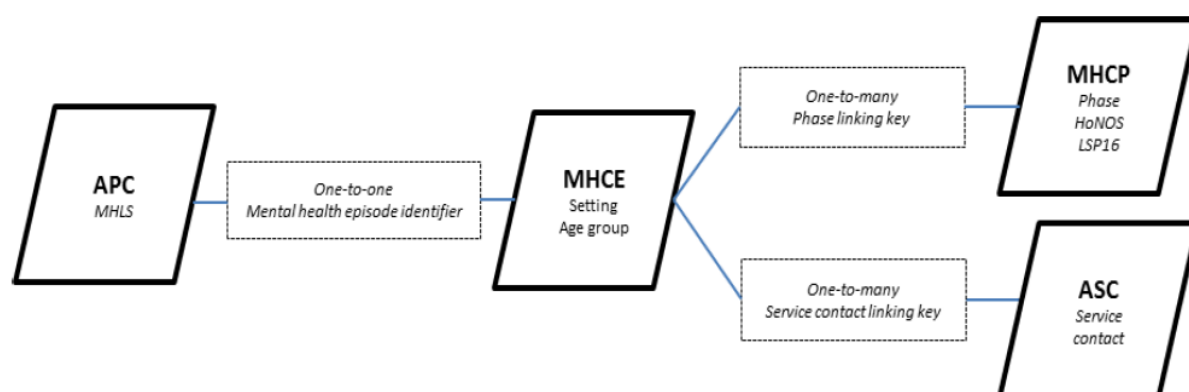

The mental health and activity data sources and data linking dependencies are summarised in Figure 3.

---

<sup>2</sup> Refer to the Australian Institute of Health and Welfare's Metadata Online Registry (METeOR) for the definition of [mental health service contact](#)

<sup>3</sup> Refer to the Australian Institute of Health and Welfare's Metadata Online Registry (METeOR) for care type information ([Hospital service—care type, code N\[N\]](#))

**Figure 3: Mental health data sources and data linking dependencies**

The source data files for the six AMHCC variables are shown in Table 1.

**Table 1: Data sources for the six AMHCC variables**

Variable	Description	Source	Comment
Setting	Admitted or Community	MHCE	Derived using 2017-18 activity data.
Mental health phase of care	Acute, Functional gain, Intensive extended, Consolidating gain or Assessment only	MHCP	
Age group	0-17, 18-64, or 65+	MHCE	If age was not populated on MHCE dataset, age group was determined from APC dataset.
Mental Health Legal Status	Voluntary or involuntary	APC	Only used for admitted setting, acute phase, ages 18-64.
HoNOS score	Health of the Nation Outcomes Scale – specific for each age group, 12-13 questions/scores	MHCP	
LSP16 score	Life Skills Profile – 16 questions/scores	MHCP	Only used for community setting, ages 18-64.

Following linkage of the activity data sets to derive valid AMHCC classes, consumer records from the activity data are linked to the relevant cost record in the NHCCD.

### 3.3 Limitations of data

There are a number of limitations with activity and cost data, which have been considered during the development of this report.

#### Sample representativeness

All jurisdictions, except Tasmania and Northern Territory, have contributed AMHCC costed data. Queensland was the only state that submitted cost data for the community setting. These have been addressed through data preparation process which included extensive data cleaning undertaken on activity and cost data to ensure the highest quality sample of data was used for model fitting and testing.

## Sample size

There were a number of end classes with a low volume of costed activity which included:

- Twelve end classes with fewer than 50 records at the adjacent end class level. These classes were grouped to the adjacent level and priced using L1.5H1.5 or a straight per-diem depending on volume of available data.
- Eight of 16 adjacent classes have the average cost of 'unknown' Health of the Nation Outcome Scale (HoNOS) score end classes greater than the average cost of the lowest HoNOS complexity group. This is addressed by equating unknown with the lowest complexity group, so that there is no disincentive to report HoNOS.

**Table 2: Sample of mental health activity and cost data**

Setting	Costed	No Cost	Total
Admitted	133,888	25,700	159,588
Community	57,030	568,553	625,583
Other	2,022	115,457	117,479
Total	192,940	709,710	902,650

## Consistency of reporting data elements

Consultation with jurisdictions identified variation across Australia on how several key data elements have been collected and reported, primarily referring to mental health phase of care. This has been accounted for in the development of admitted AMHCC shadow prices in this report.

# 4. Price weights

## 4.1 AMHCC Pricing Model

To determine an appropriate model structure for both the admitted and community mental health settings, a benchmark model was applied using a decision tree based machine learning algorithm to determine the best possible model fit given the data available. The benchmark model demonstrated that length of stay is the most important variable in the admitted setting, and the number of service contacts is the primary cost driver in the community setting. While the number of service contacts was the strongest predictor, limitations in the available community mental health data meant that this was not necessarily suitable for a national model. Thus, the admitted model is based on length of stay, and the community model uses a combination of per diem and bundled monthly payments depending on phase type.

### 4.1.1 Admitted mental health care

Admitted mental health is currently priced using the inlier-outlier AR-DRG cost model. Due to the length of stay and cost profile of these episodes, they are priced using the modified inlier bounds L1.5H1.5. Which is a length of stay 1.5 times greater or lesser than the average length of stay. This existing AR-DRG model structure was applied to admitted AMHCC classes for the shadow model where practical.

There are several cases where unknown HoNOS AMHCC end classes (suffix 'Z') have higher average costs than either the moderate or high HoNOS complexity end class. Where an unknown HoNOS end class has a higher cost than the moderate HoNOS end class, the parameter for the unknown HoNOS end class is set equal to the lowest HoNOS end class. This ensures there is no disincentive to reporting HoNOS data.

### 4.1.2 Community mental health care

A cost model for community mental health was developed by combining approaches from a number of potential model options investigated, including a service contact based model, per-diem, per-month, and fixed price only models.

As only one jurisdiction provided cost data for community mental health activity, the price weights developed for community AMHCC end classes were not considered sufficiently robust to allow jurisdictions to understand and assess the impact of pricing these services with the AMHCC.

## 4.2 Price weights

Admitted price weights expressed as National Weighted Activity Unit (NWAU(20)) for AMHCC Version 1.0 are set out in **Appendix A**.

Price weights expressed as NWAU(20) for AR-DRG Version 10.0 are set out in **Appendix B**.

# 5. Adjustments

## 5.1 Adjustments

IHPA is able to determine adjustments to the NEP to reflect legitimate and unavoidable variations in the costs of delivering health care services. IHPA investigated a number of adjustments for mental health pricing, including:

- Indigenous status
- Residential remoteness
- Treatment remoteness.

Adjustments apply to admitted episodes only for the AMHCC Shadow Pricing Model. Adjustment values are as per the National Efficient Price Determination 2020–21.

# 6. Shadow Pricing Model Technical Specifications

## 6.1 Technical specifications

Technical specifications of the AMHCC shadow pricing model development are available in the AMHCC Version 1.0 Shadow Pricing Models Report from Taylor Fry, which can be made available upon request.
